The AutoCAD team introduced a series of user interface and design improvements through the first three major AutoCAD releases, then focused on improving the core drafting functionality to support the 2009 release of AutoCAD 2010. The most recent AutoCAD release (AutoCAD 2017) supports draft preparation, model management, and sharing. The release of AutoCAD 2017 was a major milestone for the company; the previous version had been released in 2008. Autodesk announced in April 2017 that it was preparing for an IPO and expected to file for an initial public offering in the first half of 2018. Q: .htaccess redirect to another page without showing in browser I am working on my PHP website and I am using htaccess to redirect my pages from one folder to another. I want to redirect all my pages to a page called "index.php" and remove the contents of "index.php" from the source code. I am using htaccess with this code below: Options -Multiviews RewriteEngine on RewriteBase / RewriteCond %{HTTP_HOST} ^www.mywebsite.com RewriteCond %{REQUEST_URI}!/mywebsite/index.php RewriteCond %{REQUEST_FILENAME}!-f RewriteCond %{REQUEST_FILENAME}!-d RewriteRule ^(.*)\$ /mywebsite/index.php?\$1 [L] This works great for redirecting all the page requests to the index.php but when I go to mywebsite.com/test or mywebsite.com/test/ it loads the default index.php page rather than the page I want. I have tried to change the RewriteRule pattern from (.*?) to something else and then to (.*)/ or (.*). But nothing works. I've tried to add the R flag in the htaccess but it just doesn't want to work. How do I prevent the browser from showing the source code when I go to the site? A: RewriteCond %{REQUEST_FILENAME}!-f is the one you want: RewriteCond %{REQUEST_FILENAME}!-f RewriteCond %{REQUEST_FILENAME}!-d RewriteRule ^(.*)\$ index.php?\$1 [L] The url you provided is working as is in my environment, so I
